Living Area in Square Feet: 1,793

2020 Assessed Value: \$151,909
Fair Equity (of assessment) Value: \$138,312
Fair Market Value: \$145,340

Texas Property Tax Code, 2015 Edition, Regarding Uniform and Equal Appraisal of Property in Texas:

Sec. 41.43. Protest of Determination of Value or Inequality of Appraisal.

(b) A protest on the ground of unequal appraisal of property shall be determined in favor of the protesting party unless the appraisal district establishes that:

(3) the appraised value of the property is equal to or less than the median appraised value of a reasonable number of comparable properties appropriately adjusted.

Adjustments Applied in the Attached Report:

Land Adjustment:

Land adjustments in this report are based on land values indicated by the Central Appraisal District. The adjustment is the difference in the land value of the subject and the comparable property.

Additional Features:

Additional features are all cost items associated with your property other than the main area and land. These costs include, but are not limited to, garages, carports, swimming pools, Jacuzzis, porches, etc. The adjustment is the difference in the Central Appraisal District's value of the additional features of the subject and the comparable property.

Size Adjustment:

The size adjustment is a comparison of the livable area of the subject property and the comparable properties. It does not include land or additional features. This is typically the largest adjustment and we make every effort to identify only comparable properties that require adjustment under 20%. The adjustment is the difference in the subject and comparable property's living areas time the comparable property's value per square foot.

Age Adjustment:

A properties effective age is a reflection of the condition of the property at the time of appraisal. Therefore, a newer property would be expected to have greater value in the marketplace. An age adjustment is used to account for newer, better maintained, or remodeled properties.

Quality Adjustment:

Quality adjustments are applied to account for physical property differences. These adjustments are used to account for differences in the cost of construction related to different quality levels. *All information on Quality is based on information provided by the El Paso Central Appraisal District and adjustment percentages were derived from District's cost tables.*

DISCLAIMER: *This is not an appraisal;* it is an analysis of the El Paso Central Appraisal District's data. The source of the information contained in this report is the El Paso Central Appraisal District. Information incorrectly reported by CAD might have a material effect on our analysis and results.
